

Electronic Systems Packaging: A Comprehensive Guide

Preface

- 1 Introduction and Overview (Brown)
- 2 Materials for Microelectronic Packaging (Brown and Ulrich)
- 3 Processing Technologies (Naseem and Burkett)
- 4 **Organic Substrates (TBD)**
- 5 Ceramic Substrates (Barlow and Elshabini)
- 6 Electrical Fundamentals, Modeling, and Simulation (Ang and Schaper)
- 7 Thermal Considerations (Couvillion)
- 8 Mechanical Considerations (Schmidt)
- 9 Discrete and Embedded Passive Devices (Ulrich)
- 10 Electronic Package Assembly (Railkar and Warren)
- 11 Design Considerations (Parkerson and Schaper)
- 12 RF and Microwave Packaging (Barlow and Elshabini)
- 13 Power Electronics Packaging (Lostetter and Olejniczak)
- 14 Multichip and 3-D Packaging (Lyke)
- 15 MEMS and Optoelectronic Packaging (Malshe, Ozguz, and Salamo)
- 16 Reliability Considerations (Ulrich)
- 17 Cost Evaluation and Analysis (Collins, Mason, and Nachtmann)
- 18 Analytical Techniques For Materials Characterization
(Clark Fritsch, Nasrazadani and Henry)
